3rd Global Summit on P2P DIGITAL ASSET SYSTEM FUTURE ROAD AHEAD

Wednesday, 25th April, 2018 – Mumbai

Structure of any economic, legal, and political system has always been strengthened by protecting assets and setting up organizational boundaries which are achieved by a close observance of agreements & transactions which further ensures transparency, immediacy & efficiency of the system. Traditionally, agreements & transaction are recorded on paper following manual authorization process which makes current economic digital transformation of the country lagging.

India is moving towards a digital-first economy after “Digital India” was launched by our Hon’ble Prime Minister Shri Narendra Modi in July 2015 with a vision to transform India into a digitally empowered society and knowledge economy. Following this, many new technological initiatives have been taken by the individuals, educational institute, financial institutes and business conglomerates. These new business models in many sectors are now questioning the established way of doing businesses. Also, India is heading towards a less-cash economy after the remonetising of high-value currency notes in November 2016, digital payments are estimated to grow 10 times: from \$50 billion last year to \$500 billion by 2020.

By embracing blockchain technology, India could turn away from the old ladder of development and leapfrog into a modern, digital country built for the future. Implementing blockchain technology in government system can eliminate corruption on a large scale and bring the large informal sector into the formal economy.

Keeping in view the growing relevance & importance of the blockchain technology also in order to explore how blockchain technology can enable a new digital infrastructure for India, improving efficiency, transparency, privacy and cost across all sectors **ASSOCHAM, the apex knowledge chamber of India, is organizing the 3rd Global Summit on P2P Digital Asset system – Future Road Ahead” on Wednesday, 25th April, 2018 in Mumbai.** The Summit will also feature discussions covering regional, national and international case-studies, innovative IT products and global best practices in blockchain technology implementations.
