■ Rise in AI likely to hurt Centre's ambition to create millions of jobs

Education system needs overhaul: ASSOCHAM

AGE CORRESPONDENT
MUMBAI, MARCH 9

Amidst concern about robots replacing manual labour in the middle skill jobs, a report released by industry body Assocham along with global audit firm PwC has called for an overhaul of the education system to meet the emerging industry demand.

The report also noted that the increasing use of artificial intelligence (AI) could jeopardise the government's effort to create

millions of jobs through its flagship Make in India initiative.

"AI-driven automation raises the most commonly foreseen pitfalls in society—the potential mass obsolescence of manual labour in the middle-skill order, such as factory workers and technicians. The key point here is that with robotic automation, the Make in India initiative may not end up creating nearly as many jobs as it is poised to at this point in time," the report said.

■ **THE CURRENT**
sequential approach to skill building through a person's formative academic years may face obsolescence in a society with rapid de-skilling of jobs through automation.

According to it, the current sequential approach to skill building through a

person's formative academic years may face obsolescence in a society with rapid de-skilling of jobs through robotic automation.

"Academic policy formulation and dissemination of knowledge should migrate from the traditional curriculum to a more specific one tailored to emerging industry demands," the report noted.

Artificial intelligence refers to the ability of a computer or a computer-enabled robotic system to

process information and produce outcomes in a manner similar to the thought process of humans in learning, decision-making and solving problems.

Some of the sectors that would witness shrinkage of employment opportunities, but would get positively impacted in terms of improved productivity are information technology (IT), manufacturing, logistics, travel & transportation, financial services, consumer goods and serv-

ices among others.

"If a large number of people end up unemployed for extended periods of time, there needs to be a way to provide healthcare, disability and pension benefits outside employment. In the event of continuous unemployment or underemployment, government schemes to provide a minimum level of income to each citizen to guarantee basic needs are necessary to keep them out of destitution," the report added.

DIGITAL INDIA

Government to digitally recreate heritage buildings

● AGENCIES

New Delhi

In a bid to promote the country's architectural heritage, the central government will be digitally recreating monuments using 3D technology, an official said on Thursday. At an Assocham event on "Artificial Intelligence (AI) & Robotics", Union Science and Technology Secretary Ashutosh Sharma said India needed to deeply think of using Artificial Intelligence to fulfil its need for creating two crore jobs annually.

Centre will be digitally recreating monuments using 3D technology.

"The Indian Institute of Technology, Delhi (IIT-D), (under a project) recreated the lost city of Hampi, 3D printed it and also embedded all the information related to the monuments, sculptures, their whole history," he said. "We (Union Science and Technology Ministry) are going to reproduce using the same technology now

all the monuments," he added.

Emphasising the impact of Artificial Intelligence on sectors like education and healthcare, Sharma called for "strong policy statements".

"To deal with the future, we need to modify existing policies and introduce new elements and policies," the minister said. "We certainly need best of our technologists, scientists, even social scientists, economists to think very deeply about using artificial intelligence to generate jobs," he added.

With the aim to encourage women across the Nation, The Associated Chamber of Commerce and Industry of India (ASSOCHAM), Gujarat Council, organized its first ever mentoring session called "Beyond Pink" The Power of SHE (Soaring Heights of Empowerment) today at Hotel Pride Plaza in Ahmedabad.
