Healthcare 5.0: Enhancing Healthcare Capabilities

Smart Hospitals | Pharma | Ayurveda Clinics

19th April 2023, Kolkata, India

With ushering of personalised healthcare, we are witnessing a move towards healthcare 5.0, supported by technology. Healthcare 5.0 provides healthcare services including patient remote monitoring, tracking and virtual clinics, emotive telemedicine, ambient assisted living, smart self-management, wellness monitoring and control, smart treatment reminders, compliance, and adherence, and personalized and connected health care.

Smart Hospitals

From just being digital to being Smart, hospitals are working to optimize, redesign / build new clinical processes, management systems, digitized networking infrastructure to provide a valuable service to achieve better patient care, experience, and operational efficiency.

Health Tech

Healthcare technology comprising of tech software solutions along with medical devices, IT systems, algorithms, artificial intelligence (AI), cloud and blockchain, is supporting healthcare sector. Laptops and tablets have become just as common in healthcare settings as stethoscopes. A significant progress in smart and connected health care has been made. World is seeing a new era of smart disease control and detection, virtual care, smart health management, smart monitoring, and decision-making.

However, building resilience and robust healthcare 5.0 is also prone to challenges. Organizational challenges, technological and infrastructural barriers, lack of legal and regulatory frameworks and e-health policies, individual perceptions, misalignment with hospitals' strategy, lack of funding, religious and cultural barriers are identified as potential barriers to the successful implementation of healthcare 5.0.

There is a need for building resilient healthcare systems. This can be achieved by looking at the ways and means for expanding technological infrastructure, develop appropriate legal and e-health policies, standardization, and synchronization of protocols, improving stakeholders' engagement and involvement and establishment of private and public partnerships and investments.

In this regard ASSOCHAM is hosting its national conclave at Kolkata on 19th of April 2023. Program shall also have Leadership excellence awards.

Program Highlights

- ➢ Smart Hospital – Being efficient to offer human centric experiences.
- ➢ Healthcare 5.0, Personalised Patient Services – Global Trends.
- ➢ Public Private Partnerships for research and innovation.
- ➢ Strengthening Healthcare Network – Hospitals, devices.
- ➢ Skilling People.

Come and join us as we discuss the roadmap ahead for enhancing user experience, talk about roles and capabilities, discuss data & designs, implementations, and skilling of human resources.

Be part of the meet that shall have Hospitals, healthcare experts, and technology experts share the platform to discuss how newer technologies, resource training and smart management can build an efficient eco system.

The national meet shall have experts share their views, suggest way forward, network for strengthening the healthcare eco system.

ASSOCHAM invites nomination from hospitals/ pharm stakeholders for excellence awards 2023. Closing date 12th April 2023.
